## THE FIRST SMART-PHONE CONNECTED HOME PHOTOTHERAPY SYSTEM FOR PSORIASIS AND VITILIGO

### COMPLETE PRESCRIPTION CONTROL

The first and only phototherapy system that uses an app on the patient's iOS or Android smartphone to manage dosing, frequency and duration of treatment.

### EASE OF USE

The lightweight handheld device guides patients through the treatment. All therapy records, including photographs, are available to both the patient and physician.

### PATIENT SUPPORT

Clarify CarePartners act as the first line of support, coaching patients on the system and encouraging treatment adherence.

### PROVEN RESULTS

Psoriasis patients demonstrated results comparable to in-office phototherapy. Vitiligo patients showed improvements in repigmentation in as little as four weeks.

### PRACTICE EFFICIENCY

Prescription control, smartphone guidance and CarePartners reduce the physician's workload.

### AFFORDABILITY

Convenient payment plans are available for the patient.

### INDICATIONS

FDA Clearance for the treatment of vitiligo, psoriasis, eczema, seborrheic dermatitis and leucoderma on all skin types (I-VI).

UNRETOUCHED  
BEFORE / AFTER

PSORIASIS

## PROVEN RESULTS

Eight patients with stable plaque psoriasis (PSI score  $\geq 7$ ) completed a 10 week monotherapy study with the Clarify Medical® Home Light Therapy System. At the first endpoint, two patients achieved total clearance; one patient achieved early clearance at 4 weeks. All patients showed improvement with an average PSI reduction of 58%.

100% achieved clearance within two weeks when topical corticosteroids were combined with Clarify light therapy after the ten week monotherapy regimen was complete.
